About Me

I am a double-degree student in a joint program between Università della Svizzera Italiana USI located in Lugano and Università degli Studi di Milano-Bicocca.

I have a strong interest in video games, software, and data engineering, and I'm always curious to learn new things and explore different areas in the tech world.

Languages

- Italian (Native)
- English C1 IELTS (7.5)

Education

Master's Degree in Informatics (current)

Università della Svizzera Italiana (USI), Lugano & University of Milano-Bicocca, Milan

2024 - expected July 2026

I am currently enrolled in a double degree program between USI and Bicocca, which is allowing me to further expand my knowledge and interests toward the fields of IoT and Robotics. At the same time, I remain deeply interested in data-related topics, especially data engineering and its applications in modern technologies.

Bachelor's Degree in Informatics

University of Milano-Bicocca

2021 - 2024

During my bachelor's studies at Bicocca, I discovered a strong interest in data engineering as well as in software, mobile, and web development. This experience allowed me to deepen my technical skills and explore different areas of the computer science field.

High school diploma in Electronics

ITIS Ettore Conti di Milano

June 2020

Studying at Ettore Conti gave me a solid technical background and introduced me to the world of technology. During this time, I discovered my passion for computers, programming, and the role of technology in solving real-world problems.

Experience

GitHub Portfolio

<https://github.com/alegue4>

Hard Skills

- Programming Languages: Java, Python, C++
- Web Development: HTML, CSS, Streamlit
- Databases: MySQL, NeonDB, MongoDB, Redis
- Tools: Git, Visual Studio Code, IntelliJ-based IDEs

Work Experience

*Event Assistant (Steward),
AllIn Events, Milan*

2023 – Present (occasional collaboration)

Provide on-site support during events with tasks such as guest assistance, access control, and general event coordination.

Bachelor's Thesis

Development of a Web Application for Satellite Image Analysis using Streamlit

My bachelor's thesis focused on developing a web application with Streamlit for the analysis and processing of satellite images. The application allows users to interact with an interactive map, draw custom areas, and work with GeoJSON data to perform various image analysis tasks in an intuitive and user-friendly environment.

This project helped me understand key concepts in image processing, as well as explore libraries and APIs for map management and geospatial data. It also gave me insight into how these technologies can play a crucial role in fields such as ecology and environmental monitoring.

I hereby authorize the processing of my personal data included in my CV pursuant to Article 13 of Legislative Decree 196/2003 and Article 13 of the EU Regulation 2016/679 (GDPR).
